## Projects

### Portfolio Project

Built using HTML, CSS, JQuery and Bootstrap

In this fully responsive, accessible & SEO friendly portfolio along with Bootstrap I used various frontend concepts like CSS grid, Flexbox, CSS animations, gradients and more.

### Web Development FAQ

A Voice Assisted FAQ application is built for all aspiring Web Developers.

Built with [Alan AI](#), [React](#) and [Chakra UI](#) this FAQ application is intuitive, responsive and answers all Web Development questions using voice commands. As a bonus it also supports voice assisted theme toggling.

### CodePen Clone

A clone of popular code editor Codepen, where users can write, edit and preview their HTML, CSS and JavaScript code.

This stateful [React](#) application uses [React Hooks](#) to add features like saving work using localStorage API .

### Burger Builder

Built using React, Redux & Firebase

A fully functioning Burger Builder application to build, customize, review and place your order. Armed with features like User Sign-in, Orders Summary, Dynamic form generation and validation etc.
